

Lecture about life under water

Kenny Broad doesn't shy away from tough physical conditions or tough issues. Through a unique combination of underwater cave exploration, photography and environmental anthropology, he tackles challenging expeditions to unexplored caves and probes controversial problems ranging from climate change to inequity in natural resource management, focusing on the potential use and misuse of scientific information.

Broad is the April 10 guest speaker at the Squaw Valley Institute. The lecture begins at 7pm.

In 2011, Broad was named National Geographic's Explorer of the Year for his extraordinary achievements in documenting the Blue Holes of the Bahamas. His presentation is designed to be fun and fascinating, leading people to the unimagined world underwater.
