

USFS seeking public comment on Zephyr Cove Resort pier replacement

The U.S. Forest Service Lake Tahoe Basin Management Unit is asking for public input on the proposed replacement of the pier at Zephyr Cove Resort.

The proposed replacement pier would be approximately the same size as the current pier which is 358 feet long by 18 feet wide, including the existing fueling dock. The fueling dock would be re-used and would be connected to the new pier by gangways. Water, sewer, electrical, gas and fire department lines would be run through the new pier from existing connections on the shore. The abutment that anchors the pier to the shore would also be replaced.

Work could begin as early as this fall and would take several months to complete.

Comments are welcome until Aug. 3. For more information, contact Matt Dickinson at (530) 543.2769 or go online.
