

Western Nevada College exhibit features space art

A colorful exhibition of space photography is on display at the Western Nevada College Main Art Gallery through Aug. 23.

The collection contains several dozen large photographs of Earth's moon, planets in the solar system and their moons, and colorful nebulae.

The 2-foot long images are the creations of John Dykes, a Western Nevada Astronomical Society member and Jack C. Davis Observatory volunteer. His works are printed on thin metal plates that enhance the colors.

Copies of the photographs may be ordered, with the proceeds to help support the observatory.

The gallery is located in the Bristlecone Building on the Carson City campus.

Exhibition hours are Monday-Friday, 8am-9pm and Saturday, 8am-5pm.
