

Nevada to be test site for commercial drones

By Kristy Totten and Steve Tetreault, Las Vegas Review Journal

WASHINGTON – Look to the skies. Nevada was chosen Monday as a coveted base for the emerging drone industry.

The Federal Aviation Administration announced the Silver State as one of a half dozen authorized to become test sites for the commercial development of unmanned aerial vehicles, or UAVs.

The winners now get an early start – along with the federal government's lucrative seal of approval – to cash in on the vision of drones populating U.S. skies alongside piloted aircraft.

Nevada officials have projected the creation of 15,000 well-paying jobs in the state directly tied to the industry, as well as thousands more in feeder industries.
