

Important to know where water, gas valves are

Now that the autumn months are upon us, it's a good time to locate and label, or visually indicate where your water and gas shut-off valves are.

Do this inside and outside of your home.

Then, when the snow flies again, and the possibility of frozen and buried pipes occur, we will be able to quickly minimize any damage to your property.

Thanks for helping us serve you better.

– Sallie Ross-Filgo, South Lake Tahoe Fire Department
