

# Controlled burns in basin to resume

If conditions are favorable, California State Parks and the U.S. Forest Service may resume prescribed fire operations.

Operations may take place near Tahoe City and Glenbrook and may continue as conditions allow.

Each prescribed fire operation follows a prescribed fire burn plan, which considers temperature, humidity, wind, moisture of the vegetation, and conditions for the dispersal of smoke. This information is used to decide when and where to burn. When conditions meet the prescription, state and local air pollution control districts issue a burn permit allowing operations to proceed.

Smoke from prescribed fire operations is normal and may continue for several days after an ignition depending on the project size and environmental conditions.
