

Prescribed fires planned for Tahoe basin

The Tahoe Fire and Fuels Team, which includes local, state and federal agencies, may continue prescribed fire operations this week in some locations around Lake Tahoe, weather and conditions permitting.

Each prescribed fire operation follows a specialized prescribed fire burn plan that considers temperature, humidity, wind, moisture of the vegetation, and conditions for the dispersal of smoke. This information is used to decide when and where to burn.

Smoke from prescribed fire operations is normal and may continue for several days after an ignition depending on the project size and environmental conditions.
